

Module 1: Work Order Management

Tab 10: UDS Update

1. Overview

This tab is the crucial reconciliation step where the initial project plan is compared against the final implemented work. It allows for the update of the SEC's Unified Design System (UDS) to reflect the "as-built" reality. This tab becomes active only after the **SAP Update** tab is marked as complete. The primary source of truth for the "actual" data is the **Certificate of Completion (Contractor Company) Invoice** generated in Tab 8.

2. Workflow

The user will be presented with a side-by-side comparison of the planned vs. actual data for both the Work Breakdown Structure (WBS) and the materials used. The user's task is to review this comparison and then manually update the UDS system based on the final, actual data.

3. Section 1: Work Breakdown Structure (WBS) Update

- **Display:** This section will display a table comparing the planned WBS items with the actual work performed.
- **Data Source (Planned):** The original WBS data from **Tab 1: Work Order Information**.
- **Data Source (Actual):** The line items from the **Certificate of Completion (Contractor Company) Invoice** from **Tab 8**.
- **Interface:** A two-column layout:
 - **Column 1: Planned WBS:** Shows the original WBS items and quantities. (Read-Only)
 - **Column 2: Actual WBS (from Invoice):** Shows the final invoiced work items and quantities. (Read-Only)
- **User Action:** The user reviews the differences and then updates the UDS system accordingly.

4. Section 2: Material Update

- **Display:** This section will display a table comparing the planned materials with the actual materials used.
- **Data Source (Planned):** The original materials list from **Tab 1: Work Order Information**.

- **Data Source (Actual):** The final reconciled materials list from the **Material Reconciliation** section of the **Excavation** and **Electrical** tabs, as finalized in the invoice.
- **Interface:** A two-column layout:
 - **Column 1: Planned Materials:** Shows the original material list and quantities. (Read-Only)
 - **Column 2: Actual Materials Used:** Shows the final used material quantities. (Read-Only)
- **User Action:** The user reviews the differences (e.g., more cable used than planned) and updates the UDS system.

5. Completion

- This tab is marked as complete once the user confirms that the UDS system has been manually updated with the as-built data. This can be a simple checkbox:
 - ☐ I confirm that the UDS has been updated with the final WBS and Material information.
- Once this checkbox is ticked, the **UDS** milestone on the main Work Order dashboard is marked as complete.
