

Module 1: Work Order Management

Tab 8: Certificates of Work Completion

1. Overview

This tab is a critical step for generating the official documentation required to update the SEC's internal systems (UDS and SAP). The primary output of this tab is the **Certificate of Completion (Contractor Company) Invoice**, which serves as the basis for invoicing and payment. The certificates generated here will also be used in a later phase to close the municipal permits on the Balady platform.

2. Workflow

The process for managing certificates is as follows:

- 1 **Certificate Identification:** The system automatically identifies which of the six completion certificates are required for the current Work Order based on the Permit Type and the work phases that were executed.
- 2 **Auto-Generation:** The user selects a required certificate from a list. The system then generates the document by auto-filling a predefined template with all relevant data from the previous tabs.
- 3 **Review and Signature:** The generated certificate is displayed in a viewer. Designated fields for electronic signatures are provided for all responsible parties (e.g., Contractor, Consultant, Lab Representative).
- 4 **Finalization:** Once all signatures are captured, the system finalizes the document, embedding the signatures and saving it as a secure, non-editable PDF.
- 5 **Document Management:** The finalized PDF is stored and listed within this tab, available for download and ready for submission to SEC.

3. Certificate Management View

A table will list all certificates relevant to the Work Order.

- **Columns:**
 - Certificate Name: The name of the certificate (e.g., "Certificate of Completion (Emergency Excavation Works)").
 - Status: The current status of the document (e.g., Required, Generated, Signed, Finalized).
 - Actions: A button group with options based on the status:
 - Generate: Appears if the status is Required.
 - View/Sign: Appears if the status is Generated.
 - View/Download: Appears if the status is Finalized.

4. Certificate Generation and Auto-Filling

The system will use data from across the entire Work Order to pre-populate the certificates. Key data points include:

- **From Work Order Information:** Work Order No., Contractor Name, Client Name (e.g., Saudi Electricity Company).
- **From Municipal Permits:** Permit Number, Permit Issue Date, Work Start/End Dates.
- **From Site Survey:** Excavation dimensions (Length, Width, Depth), location details.
- **From Civil / Lab Testing:** Lab test results and dates.
- **From Material Reconciliation:** Final material quantities used.

5. List of Certificates

The system will manage the following certificate templates:

- 6 **Certificate of Completion (Emergency Excavation Works):** For emergency work permits.
- 7 **Certificate of Completion (Regular Excavation Works):** For standard excavation permits.
- 8 **Certificate of Completion (Individual Buildings):** For permits related to individual building connections.
- 9 **Certificate of Completion (Consultant):** A summary of all tests and work, signed off by the consultant.
- 10 **Certificate of Completion (Lab Test):** A summary of all lab test results, generated from the lab platform data.
- 11 **Certificate of Completion (Contractor Company) Invoice:** This serves as the final invoice, detailing all work performed and materials consumed. It is the basis for the final payment request.

6. Electronic Signatures

- When a user clicks View/Sign, the document will be displayed with clear signature boxes.
- Each signature box will be labeled with the role of the signatory (e.g., "Contractor Representative," "Consultant Engineer").
- Users can sign using a stylus on a touch device or by typing their name, which is then rendered in a script font.

7. Completion

This tab is marked as complete once the **Certificate of Completion (Contractor Company) Invoice** and any other required certificates are Finalized. The completion of this tab triggers

the **Invoice** milestone on the main Work Order dashboard and signals that the project is ready for financial reconciliation with SEC.
